

COUNTY OF SAN LUIS OBISPO
MITIGATED NEGATIVE DECLARATION & NOTICE OF DETERMINATION

ENVIRONMENTAL DETERMINATION NO. ED10-180

DATE: October 27, 2011

PROJECT/ENTITLEMENT: Public Works – North Coast Circulation Study, 245R12C127

APPLICANT NAME: County of San Luis Obispo, Department of Public Works

ADDRESS: County Government Center, Room 207
San Luis Obispo, CA 93408

CONTACT PERSON: Eric Wier, Environmental Resources Division **Telephone:** (805) 788-2766

PROPOSED USES/INTENT: The Department of Public Works will update the North Coast Circulation Study. The update will review the ongoing road improvement fee program, including the level of fees charged to new development, and suggested improvements. The focus of the Circulation Study is to identify and correct capacity deficiencies related to new development. Road impact fee monies can only be applied to projects that correct capacity deficiencies.

LOCATION: The North Coast Road Fee Area is in the community of Cambria, in the North Coast planning area. The projects planned to use road fees are within the Urban Reserve Line of the Cambria area and within or adjacent to the Commercial Retail, Open Space, Public Facilities, Residential Multi-Family and Residential Single Family land use categories in the North Coast planning area, Second Supervisorial district.

LEAD AGENCY: County of San Luis Obispo
Department of Planning & Building
County Government Center, Room 310
San Luis Obispo, CA 93408

OTHER POTENTIAL PERMITTING AGENCIES: None

ADDITIONAL INFORMATION: Additional information pertaining to this environmental determination may be obtained by contacting the above Lead Agency address or (805) 781-5600.

COUNTY "REQUEST FOR REVIEW" PERIOD ENDS AT4:30 p.m. on November 10, 2011
(Circle one) 20-DAY 30-DAY PUBLIC REVIEW PERIOD begins at the time of notice publication

Notice of Determination State Clearinghouse No. _____

This is to advise that the San Luis Obispo County _____ as ☐ *Lead Agency*
☒ *Responsible Agency* approved/denied the above described project on _____, and has made the following determinations regarding the above described project:

The project will not have a significant effect on the environment. A Negative Declaration was prepared for this project pursuant to the provisions of CEQA. Mitigation measures were made a condition of the approval of the project. A Statement of Overriding Considerations was not adopted for this project. Findings were made pursuant to the provisions of CEQA.

This is to certify that the Negative Declaration with comments and responses and record of project approval is available to the General Public at:

Department of Planning and Building, County of San Luis Obispo,
County Government Center, Room 310, San Luis Obispo, CA 93408-2040

**COUNTY DEPARTMENT OF PUBLIC WORKS
NORTH COAST CIRCULATION STUDY
COUNTY OF SAN LUIS OBISPO
MITIGATED NEGATIVE DECLARATION & INITIAL STUDY**

Abstract

The County of San Luis Obispo, Department of Public Works proposes to update the North Coast Circulation Study. The fee area includes the entire North Coast planning area, however, all of the current projects planned to use the road fees are located within the community of Cambria. The projects are within a variety of land use categories in the North Coast planning area, Second Supervisorial district.

Comments on this document should be sent to Eric Wier, County Department of Public Works, County Government Center, San Luis Obispo, CA 93408.

The following persons may be contacted for additional information concerning this document:

Eric Wier, Environmental Programs Division
or
Ryan Chapman, P.E., Project Manager
County Department of Public Works
County Government Center, Room 207
San Luis Obispo, CA 93408
(805) 781-5252

This proposed Mitigated Negative Declaration has been issued by:

10-18-2011
Date

Ellen Carroll
Ellen Carroll, Environmental Coordinator
County of San Luis Obispo

The project proponent, who agrees to implement the mitigation measures for the project, is:

10/19/11
Date

for Dave Flynn
Paavo Ogren, Director of Public Works
County of San Luis Obispo

Initial Study Summary – Environmental Checklist

**Project Title & No. County Public Works - North Coast Circulation Study; ED10-180
(245R12C127)**

ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED: The proposed project could have a "Potentially Significant Impact" for at least one of the environmental factors checked below. Please refer to the attached pages for discussion on mitigation measures or project revisions to either reduce these impacts to less than significant levels or require further study.

<input checked="" type="checkbox"/> Aesthetics	<input checked="" type="checkbox"/> Geology and Soils	<input type="checkbox"/> Recreation
<input checked="" type="checkbox"/> Agricultural Resources	<input checked="" type="checkbox"/> Hazards/Hazardous Materials	<input type="checkbox"/> Transportation/Circulation
<input checked="" type="checkbox"/> Air Quality	<input checked="" type="checkbox"/> Noise	<input type="checkbox"/> Wastewater
<input checked="" type="checkbox"/> Biological Resources	<input type="checkbox"/> Population/Housing	<input checked="" type="checkbox"/> Water
<input checked="" type="checkbox"/> Cultural Resources	<input type="checkbox"/> Public Services/Utilities	<input type="checkbox"/> Land Use

DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial evaluation, the Environmental Coordinator finds that:

- ☐ The proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☒ Although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☐ The proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ The proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☐ Although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Project Environmental Analysis

The County's environmental review process incorporates all of the requirements for completing the Initial Study as required by the California Environmental Quality Act (CEQA) and the CEQA Guidelines. The Initial Study includes staff's on-site inspection of the project site and surroundings and a detailed review of the information in the file for the project. In addition, available background information is reviewed for each project. Relevant information regarding soil types and characteristics, geologic information, significant vegetation and/or wildlife resources, water availability, wastewater disposal services, existing land uses and surrounding land use categories and other information relevant to the environmental review process are evaluated for each project. Exhibit A includes the references used, as well as the agencies or groups that were contacted as a part of the Initial Study. The Environmental Division uses the checklist to summarize the results of the research accomplished during the initial environmental review of the project.

Persons, agencies or organizations interested in obtaining more information regarding the environmental review process for a project should contact the County of San Luis Obispo Environmental Division, Rm. 200, County Government Center, San Luis Obispo, CA, 93408-2040 or call (805) 781-5600.

A. PROJECT

DESCRIPTION: A request by the Department of Public Works to update the North Coast Circulation Study. The update includes review of the ongoing road improvement fee program, including the level of fees charged to new development, and suggested improvements. In accordance with the Mitigation Fee Act (Government Code 66000 et seq.), public agencies may exact fees from development projects for the purpose of defraying all or a portion of the cost of public facilities related to the development project. The North Coast Road Fee Area extends approximately 30 miles from the Monterey County line south to approximately Villa Creek Road, north of Cayucos. The North Coast Road Fee Area includes the community of Cambria and the village of San Simeon Acres, and is within the North Coast planning area. The road fee areas are depicted on the attached figure.

Background

Circulation Studies

Traffic circulation studies address the need for capacity related transportation improvements necessary to offset cumulative traffic impacts on community infrastructure that result from new development. Circulation studies identify needed improvements and include the costs and potential funding mechanisms for these improvements, resulting in "road improvement fees" that are assessed against new development.

In accordance with the Mitigation Fee Act (Government Code Section 66000 et seq.), public agencies may exact fees from development projects for the purpose of defraying all or a portion of the cost of new public facilities related to development. The County of San Luis Obispo levies these "road impact fees" in several unincorporated communities. The County adopts capital improvement plans in these communities, which indicate the approximate location, size, time of availability, and cost estimates for all facilities or improvements to be financed with the road impact fees. The capital improvement plans are adopted and annually updated by a resolution of the Board of Supervisors.

The focus of the Circulation Study is to identify and correct capacity deficiencies related to new development, as they are the only projects that road impact fee monies can be applied to (per Government Code Section 66000). Other projects related to safety, bicycle, pedestrian, public transportation facilities and existing roadway geometric deficiencies must be funded by other sources. These improvements paid for by the fees are intended to mitigate for cumulative areawide development.

As road impact fee projects are developed the roadways will be constructed to the current standard, incorporating bike paths as well as pedestrian paths where they are required by the governing plans. This environmental document addresses only those improvements identified in the Circulation Study to be wholly or partially funded by “road impact fees,” and not those improvements related to safety, bicycle, pedestrian, public transportation facilities, and existing roadway geometric deficiencies.

The County of San Luis Obispo has not previously subjected circulation studies to the CEQA process. However, recent case law suggests that CEQA review is necessary. In *California Native Plant Society v. County of El Dorado* [(2009) 170 Cal.App.4th 1026], the court ruled that although a comprehensive program funded by impact fees may be a sound strategy for addressing impacts, the absence of any environmental review for the adoption of the fee program meant that reviews of individual projects triggering the fee could not presumptively assume that payment of the fee constitutes full mitigation for the potential impact and CEQA review must take place at the time of the circulation study update.

County General Plan

The County’s General Plan is composed of several parts, or elements, including the Land Use Element and the *Circulation Element*. The County is segregated into 13 *planning areas*. Each of the communities for which circulation studies have been prepared is within one of these planning areas. The land use within each planning area is governed by its *area plan* and the land use ordinance, which are components of the County’s General Plan. The Circulation chapters of the area plans contain recommended objectives and projects. Circulation Maps in the area plans show existing and proposed collector and arterial streets. The circulation element describes transportation management programs, major features of the circulation system, and alternative modes of travel to the private automobile. System improvements and programs are recommended to implement the circulation needs of the Land Use Element. The circulation element identifies major improvements as the land uses envisioned by the area plan develop along with growth within the communities and the surrounding area.

The Resource Management System (RMS), through the Annual Resource Summary Report, identifies the necessary timetables for making road improvements with timely funding decisions. Funding decisions for road improvements consider the feasible use of county general funds, state and federal grants and funding sources, and development fees. The RMS focuses on collecting data in order to avoid and correct resource deficiencies with regard to five essential resources: water supply, sewage disposal, schools, roads, and air quality. This information is compiled in an Annual Resource Summary Report (ASR) that guides decisions about balancing development with the resources necessary to sustain such development. It focuses on collecting data, identifying resource problems, and recommending solutions.

CEQA Analysis of General Plan – North Coast Area Plan

The Final Environmental Impact Report for the North Coast Area Plan was prepared in March 1996 and approved in December 1996. The Final EIR for the area plan update identifies existing traffic and capacities for major roads in the planning area. The Final EIR did not attempt to evaluate the environmental impacts of future transportation improvements in any detail.

This environmental document addresses environmental effects of the identified capital projects for the North Coast area at a level of detail commensurate with the current level of design of these projects. More focused and detailed environmental review of some projects may be required prior to formally making a decision to proceed with the project. Project specific environmental review will be more meaningful when specific project details are available.

The circulation study does not commit the County to building a specific project identified in the circulation study. At the time sufficient funds are available, the County could determine that a project

not listed in the circulation study would be a more appropriate use of road impact fees. In this scenario, a determination as to CEQA compliance would be required.

North Coast Circulation Study

On February 25, 1992 the Board of Supervisors approved the North Coast Circulation Study and a Resolution establishing road improvement fees on new development under the provisions of Ordinance 2379. The Board adopted the most recent update of the Circulation Study in December, 2009. The *2010 Annual Update, North Coast Circulation Study* identified the following capital improvement projects:

USGS Map Reference Number*	Project	Cost Estimate	Percent from Impact Fees
1	Traffic signal on Main Street at Tamson Drive	\$235,000	100%
2	Traffic signal on Main Street at Cambria Drive	\$235,000	100%
3	Traffic signal on Main Street at Windsor Boulevard	\$235,000	100%
4	Traffic signal on Highway 1 at Weymouth Street	\$235,000	50%
5	Traffic signal on Main Street at Burton Drive	\$235,000	100%

Within the issue area discussions below, the “setting” and “impacts” sections focus not on the entire fee area, but on the planned capital project area locations listed above, within the community of Cambria.

It is important to note that no physical change to the environment would occur as a result of the assessment of circulation fees within the circulation fee area. Physical changes will occur as a result of improvements funded by the fees. Likewise, the assessment of circulation fees will not contribute to cumulative impacts. However, the improvements funded by the fees, in combination with other projects in the area, will result in physical changes to the environment. Mitigation measures incorporated into this environmental document, together with existing mitigation programs such as the National Pollutant Discharge Elimination System (NPDES) for water quality protection, and the SLOAPCD’s Clean Air Plan (CAP) render the effects of improvement projects’ contribution less than cumulatively considerable.

<i>South:</i> Varied	<i>West:</i> Varied

C. ENVIRONMENTAL ANALYSIS

During the Initial Study process, several issues were identified as having potentially significant environmental effects (see following Initial Study). Those potentially significant items associated with the proposed uses can be minimized to less than significant levels.

COUNTY OF SAN LUIS OBISPO INITIAL STUDY CHECKLIST

1.	AESTHETICS - Will the project:	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a)	<i>Create an aesthetically incompatible site open to public view?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b)	<i>Introduce a use within a scenic view open to public view?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c)	<i>Change the visual character of an area?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d)	<i>Create glare or night lighting, which may affect surrounding areas?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e)	<i>Impact unique geological or physical features?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f)	<i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The proposed capital improvement projects are located within the Urban Reserve Line (URL) of the community of Cambria. Cambria appears as a charming village whose nucleus is on Main Street, with a second commercial strip along the east side of Moonstone Beach Drive, all framed by Monterey pine forest and decreasingly intensive commercial development as one moves outward, away from the downtown area. Fairly dense residential neighborhoods can be found to the north, west and south of the commercial area. The projects identified in the project description consist solely of traffic signals. The signals will be on and visible from major public roadways. One of the traffic signals is on a section of Highway 1 that is classified as a Scenic Highway.

Impact. No significant visual impacts are expected to occur from installation and operation of the traffic signals. Although the traffic signal at Weymouth and Highway 1 is on a section of Scenic Highway, inclusion of a traffic signal along this section, which goes through the urban area of Cambria, is not considered significant and there are several existing traffic signals along this section of highway. The traffic signals are not expected to result in significant individual or cumulative aesthetic impacts. However, the scope and number of future projects in Cambria are not known, and it is possible the projects described herein may contribute to significant cumulative impacts.

Mitigation/Conclusion. No mitigation measures are needed at this time; however future project-specific analysis will identify any aesthetic impacts and describe appropriate mitigation measures if impacts are identified when more project details are available. Listed below are mitigation measures typically used to mitigate aesthetic impacts.

[VR1] Design to allow the inclusion of applicable streetscape features outlined in the Cambria Commercial Design Plan.

[VR2] Revegetate all disturbed areas with landscaping or native-type vegetation, as appropriate.

[VR3] Where cut and fill slopes exceed heights not commonly seen in the area (say, more than 5 feet) apply landform grading techniques where the toe and top of cut are rounded to resemble natural slopes.

[VR4] Retaining walls shall be faced with natural appearing rock surfaces when visible to the public.

These or other mitigation measures could potentially be used for these projects. Future analysis of individual projects may require additional measures. There is no indication at this time that the projects would result in aesthetic impacts that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

2. AGRICULTURAL RESOURCES

- *Will the project:*

	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Convert prime agricultural land to non-agricultural use?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) <i>Impair agricultural use of other property or result in conversion to other uses?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) <i>Conflict with existing zoning or Williamson Act program?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) <i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The proposed capital improvement projects are located within the Urban Reserve Line (URL) of the community of Cambria. The improvement projects are not within or adjacent to production agricultural lands. Soil types of varied suitability for agriculture occur in the project areas and are as follows:

Soil Type	Agricultural Potential	
	<i>Capability unit (non-irrigated)</i>	<i>Storie index rating</i>
Concepcion loam, 2 to 5 % slopes	IIIe-3	43
Salinas silty clay loam, 2 to 9% slopes	IIIe-1	77

Impact. A referral was sent to the County Agricultural Commissioner addressing an update to all the County Circulation Study Fee Areas. Resulting comments from the County Agricultural Commissioner state that, "a variety of impacts to agricultural resources and operations may result from the proposed road improvements [including, but not limited to]: direct and indirect conversion of agricultural resources, including important Agricultural Soils, to nonagricultural uses; temporary and/or permanent access limitations to agricultural operations; necessity for infrastructure relocation; land use incompatibilities and operational restrictions during construction; Williamson Act public land acquisition." "Such potential impacts should be evaluated during subsequent project specific environmental review." (Auchinachie; June 27, 2011)

Mitigation/Conclusion. No significant impacts to agricultural resources are expected to occur from

any of the projects because of lack of agricultural lands. No mitigation measures are needed at this time; however future project-specific analysis will identify any impacts to agricultural resources and describe appropriate mitigation measures if impacts are identified when more project details are available. There is no indication at this time that the projects would result in impacts to agricultural resources that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

3. AIR QUALITY - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Violate any state or federal ambient air quality standard, or exceed air quality emission thresholds as established by County Air Pollution Control District?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) <i>Expose any sensitive receptor to substantial air pollutant concentrations?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) <i>Create or subject individuals to objectionable odors?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) <i>Be inconsistent with the District's Clean Air Plan?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) <i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The Air Pollution Control District (APCD) has developed the 2009 CEQA Air Quality Handbook to evaluate project specific impacts and help determine if air quality mitigation measures are needed, or if potentially significant impacts could result. To evaluate long-term emissions, cumulative effects, and establish countywide programs to reach acceptable air quality levels, a Clean Air Plan has been adopted (prepared by APCD).

The North Coast Circulation Study Areas are located within San Luis Obispo County, which is part of the South Central Coast Air Basin (SCCAB). The SCCAB consists of San Luis Obispo, Santa Barbara and Ventura Counties. The climate of the region is characterized as Mediterranean, with warm, dry summers and cooler, relatively damp winters. Along the coast, mild temperatures prevail most of the year due to the moderating influence of the Pacific Ocean. The effects of the Pacific Ocean are diminished inland and by major intervening terrain features such as the coastal Santa Lucia Mountain Range.

In years past, air quality in the SCCAB has exceeded established standards for lead, carbon monoxide, sulfur dioxide, ozone, and particulate matter (PM). Violations of the state standard for respirable particulate matter (PM10) still occur several times a year.

On a regional basis, ozone is the pollutant of greatest concern in the SCCAB. Ozone located in the upper atmosphere acts in a beneficial manner by shielding the earth from harmful ultraviolet radiation that is emitted by the sun. However, ozone located in the lower atmosphere is a major health and environmental concern.

An attainment designation for an area signifies that pollutant concentrations did not violate the

standard for that pollutant in that area. A nonattainment designation indicates that a pollutant concentration violated the standard at least once, excluding those occasions when a violation was caused by an exceptional event, as defined in the criteria. Unclassified designations indicate insufficient data is available to determine attainment status.

San Luis Obispo County is in non-attainment for State PM₁₀ & Ozone. Based on the recent pull back from EPA's proposed new Ozone Standard, part or all of SLO County is now pending a non-attainment designation for the 2008 federal ozone standard. According to SLOAPCD, the largest contributors of air pollution are motor vehicles. Reducing particulate matter air pollution is one of the San Luis Obispo County Air Pollution Control District's (SLOAPCD) highest public health priorities. Exposure to particulate pollution is linked to increased frequency and severity of asthma attacks, pneumonia and bronchitis, and even premature death in people with pre-existing cardiac or respiratory disease.

SLOAPCD is required to monitor air pollutant levels to assure that the air quality standards are met, and if they are not met, to also develop strategies to meet the standards. Depending on whether or not the standards are met or exceeded, the air basin is classified as being in attainment or nonattainment. An air quality monitoring station located in Morro Bay on Morro Bay Boulevard did not register an exceedance of the state or federal ozone standards for 2008–2009. However, the state PM₁₀ standard was exceeded once in 2008 and once in 2009.

State standards for ozone and PM₁₀ are currently exceeded in SLO County, thus SLOAPCD is required to develop a plan to achieve and maintain the state ozone standard by the earliest practicable date. SLOAPCD's plan is called the Clean Air Plan, or CAP. The 2001 CAP was adopted by the SLOAPCD Board in March 2002. Transportation control measures and land use planning strategies play an important role in the implementation of the CAP.

Impact. Circulation studies address the need for capacity related transportation improvements and are developed to identify and correct capacity deficiencies related to new development. Improved road circulation reduces vehicle idling time and congestion, theoretically improving air quality; therefore the Circulation Study Road Improvement Fees themselves should have a positive impact on air quality.

The improvement projects funded by the Road Improvement Fees in the North Coast Traffic Circulation Study would involve construction activity that could generate temporary increases in local air pollution. The areas of disturbance would be determined when project designs are prepared. The projects will result in short-term construction equipment exhaust and fugitive dust emissions as well as emissions from construction commutes. During project-specific analysis, recommendations in the CEQA Air Quality Handbook will be used to calculate construction and operational phase emissions. If the project's pollutant generation levels are below specified thresholds in the Handbook, no mitigation is warranted. On the other hand, if the air pollution levels generated by a project exceed Handbook thresholds, mitigation measures will be required.

No significant air quality impacts are expected to occur from the traffic signal projects. Larger scale

improvements would be subject to project-specific environmental analysis. Design of these larger scale projects has not been initiated; therefore details are insufficient to identify and describe air quality impacts. Nonetheless, potentially significant air quality impacts may be identified in future analyses. It may be necessary to calculate the project's construction impacts without knowing the exact fleet of construction equipment involved in the project. Table 2-2 of the Handbook contains screening construction emission rates based on the volume of soil moved and the area disturbed. This table should only be used when specific project information is not available.

Construction Phase Greenhouse Gas Impacts and Mitigation

A Greenhouse Gas (GHG) impact evaluation and the implementation of feasible mitigation may be required for larger projects. The Mitigated Negative Declaration would evaluate the project's carbon dioxide (CO₂) emissions, as well as other GHG sources converted to carbon dioxide equivalents and would identify feasible mitigation.

Construction Permit Requirements

Portable equipment, 50 horsepower (hp) or greater, used during construction activities may require California statewide portable equipment registration (issued by the California Air Resources Board) or an APCD permit. Operational sources may also require APCD permits.

Hydrocarbon Contaminated Soil

Hydrocarbon contaminated soil could result in adverse air quality impacts when exposed to the atmosphere. Should hydrocarbon contaminated soil be encountered during construction activities, the APCD will be notified as soon as possible after affected material is discovered to determine if an APCD Permit will be required.

Lead During Demolition

Demolition of structures coated with lead based paint can result in the release of lead containing particles from the site. Sandblasting or removal of paint by heating with a heat gun can result in significant emissions of lead. Therefore, proper abatement of lead before demolition of these structures must be performed in order to prevent the release of lead from the site. An APCD permit may be required.

Demolition of Asbestos Containing Materials

Demolition activities can have potential negative air quality impacts, including issues surrounding proper handling, demolition, and disposal of asbestos containing material (ACM). If building(s) are removed or renovated, or utility pipelines are scheduled for removal or relocation, requirements include, but are not limited to: 1) notification requirements to the APCD, 2) asbestos survey conducted by a Certified Asbestos Inspector, and, 3) applicable removal and disposal requirements of identified ACM.

Developmental Burning

Effective February 25, 2000, the APCD prohibited developmental burning of vegetative material within San Luis Obispo County.

Construction Phase Idling Limitations

Diesel engine idling is regulated by State law: Section 2485 of Title 13 of the California Code of Regulations (for on-road vehicles) and Section 2449(d)(2) of the California Air Resources Board's In-Use off-Road Diesel regulation (for off-road equipment).

Truck Routing

Proposed truck routes should be evaluated and selected to ensure routing patterns have the least impact to residential dwellings and other sensitive receptors, such as schools, parks, day care centers, nursing homes, and hospitals. If the project has significant truck trips where hauling/truck trips are routine activity and operate in close proximity to sensitive receptors, toxic risk needs to be evaluated.

Mitigation/Conclusion. . Below is a list of mitigation measures typically used to mitigate impacts to air quality as a result of road construction projects. These or other comparable mitigation measures would potentially be used for these projects. Application of standard mitigation measures, and in some cases, best available control technologies (BACT) should ensure any air quality impacts are less than significant. However, future project-specific analysis will be conducted at the time more detail is available for any of the proposed improvements. The analysis at that time will identify any air quality impacts and describe appropriate mitigation measures.

[AQ-1] Projects with grading areas that are less than 4-acres and that are not within 1,000 feet of any sensitive receptor shall implement the following mitigation measures to minimize nuisance impacts and to significantly reduce fugitive dust emissions:

- Reduce the amount of the disturbed area where possible;
- Use water trucks or sprinkler systems in sufficient quantities to prevent airborne dust from leaving the site. Increased watering frequency would be required whenever wind speeds exceed 15 mph. Reclaimed (non-potable) water should be used whenever possible;
- All dirt stock-pile areas should be sprayed daily as needed;
- All roadways, driveways, sidewalks, etc. to be paved should be completed as soon as possible, and building pads should be laid as soon as possible after grading unless seeding or soil binders are used;
- All of these fugitive dust mitigation measures shall be shown on grading and building plans; and
- The contractor or builder shall designate a person or persons to monitor the fugitive dust emissions and enhance the implementation of the measures as necessary to minimize dust complaints, reduce visible emissions below 20% opacity, and to prevent transport of dust offsite. Their duties shall include holidays and weekend periods when work may not be in progress.

Projects with grading areas that are greater than 4-acres or are within 1,000 feet of any sensitive receptor shall implement the following mitigation measures to minimize nuisance impacts and to significantly reduce fugitive dust emissions:

- Reduce the amount of the disturbed area where possible;
- Use of water trucks or sprinkler systems in sufficient quantities to prevent airborne dust from leaving the site. Increased watering frequency would be required whenever wind speeds exceed 15 mph. Reclaimed (non-potable) water should be used whenever possible;
- All dirt stock pile areas should be sprayed daily as needed;
- Permanent dust control measures identified in the approved project revegetation and landscape plans should be implemented as soon as possible following completion of any soil disturbing activities;
- Exposed ground areas that are planned to be reworked at dates greater than one month after initial grading should be sown with a fast germinating, non-invasive grass seed and watered until vegetation is established;
- All disturbed soil areas not subject to revegetation should be stabilized using approved chemical soil binders, jute netting, or other methods approved in advance by the APCD;
- All roadways, driveways, sidewalks, etc. to be paved should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used;
- Vehicle speed for all construction vehicles shall not exceed 15 mph on any unpaved surface at the construction site;
- All trucks hauling dirt, sand, soil, or other loose materials are to be covered or should maintain at least two feet of freeboard (minimum vertical distance between top of load and top of trailer) in accordance with CVC Section 23114;
- Install wheel washers where vehicles enter and exit unpaved roads onto streets, or wash off trucks and equipment leaving the site;
- Sweep streets at the end of each day if visible soil material is carried onto adjacent paved roads. Water sweepers with reclaimed water should be used where feasible;
- All of these fugitive dust mitigation measures shall be shown on grading and building plans; and
- The contractor or builder shall designate a person or persons to monitor the fugitive dust emissions and enhance the implementation of the measures as necessary to minimize dust complaints, reduce visible emissions below 20% opacity, and to prevent transport of dust offsite. Their duties shall include holidays and weekend periods when work may not be in progress. The name and telephone number of such persons shall be provided to the APCD Compliance Division prior to the start of any grading, earthwork or demolition.

[AQ-2] The standard mitigation measures for reducing nitrogen oxides (NO_x), reactive organic gases (ROG), and diesel particulate matter (DPM) emissions from construction equipment are listed below:

- Maintain all construction equipment in proper tune according to manufacturer's specifications;
- Fuel all off-road and portable diesel powered equipment with ARB certified motor vehicle diesel fuel (non-taxed version suitable for use off-road);
- Use diesel construction equipment meeting ARB's Tier 2 certified engines or cleaner off-road heavy-duty diesel engines, and comply with the State off-Road Regulation;

- Use on-road heavy-duty trucks that meet the ARB's 2007 or cleaner certification standard for on-road heavy-duty diesel engines, and comply with the State On-Road Regulation;
- Construction or trucking companies with fleets that do not have engines in their fleet that meet the engine standards identified in the above two measures (e.g. captive or NO_x exempt area fleets) may be eligible by proving alternative compliance;
- All on and off-road diesel equipment shall not idle for more than 5 minutes. Signs shall be posted in the designated queuing areas and or job sites to remind drivers and operators of the 5 minute idling limit;
- Diesel idling within 1,000 feet of sensitive receptors is not permitted;
- Staging and queuing areas shall not be located within 1,000 feet of sensitive receptors;
- Electrify equipment when feasible;
- Substitute gasoline-powered in place of diesel-powered equipment, where feasible; and,
- Use alternatively fueled construction equipment on-site where feasible, such as compressed natural gas (CNG), liquefied natural gas (LNG), propane or biodiesel.

If the estimated ozone precursor emissions from the actual fleet for a given construction phase are expected to exceed the APCD threshold of significance after the standard mitigation measures are factored into the estimation, then BACT needs to be implemented to further reduce these impacts. The BACT measures can include:

- Further reducing emissions by expanding use of Tier 3 and Tier 4 off-road and 2010 on-road compliant engines;
- Repowering equipment with the cleanest engines available; and
- Installing California Verified Diesel Emission Control Strategies. These strategies are listed at: <http://www.arb.ca.gov/diesel/verdev/vt/cvt.htm>

If the estimated construction emissions from the actual fleet are expected to exceed either of the APCD Quarterly Tier 2 thresholds of significance after the standard and BACT measures are factored into the estimation, then an APCD approved CAMP (see Technical Appendix 4.5 for CAMP Guidelines) and offsite mitigation need to be implemented in order to reduce potential air quality impacts to a level of insignificance.

CAMP

The CAMP should be submitted to the APCD for review and approval prior to the start of construction and should include, but not be limited to, the following elements:

- A Dust Control Management Plan that encompasses all, but is not limited to, dust control measures that were listed above in the "dust control measures" section;
- Tabulation of on and off-road construction equipment (age, horse-power and miles and/or hours of operation);
- Schedule construction truck trips during non-peak hours to reduce peak hour emissions;
- Limit the length of the construction work-day period, if necessary; and,
- Phase construction activities, if appropriate.

Off-Site Mitigation

Examples off-site mitigation strategies include, but are not limited to, the following:

- Fund a program to buy and scrap older heavy-duty diesel vehicles or equipment;
- Replace/repower transit buses;
- Replace/repower heavy-duty diesel school vehicles (i.e. bus, passenger or maintenance vehicles);
- Retrofit or repower heavy-duty construction equipment, or on-road vehicles;
- Repower or contribute to funding clean diesel locomotive main or auxiliary engines;
- Purchase VDECs for local school buses, transit buses or construction fleets;
- Install or contribute to funding alternative fueling infrastructure (i.e. fueling stations for NG, LPG, conductive and inductive electric vehicle charging, etc.);
- Fund expansion of existing transit services; and,
- Replace/repower marine diesel engines.

[AQ-3] Asbestos / Naturally Occurring Asbestos Naturally occurring asbestos (NOA) has been identified by the state Air Resources Board as a toxic air contaminant. Serpentine and ultramafic rocks are very common throughout California and may contain naturally occurring asbestos. The SLO County APCD has identified areas throughout the County where NOA may be present (see the APCD's 2009 CEQA Handbook, Technical Appendix 4.4). If the project site is located in a candidate area for Naturally Occurring Asbestos (NOA), the following requirements apply. Under the ARB Air Toxics Control Measure (ATCM) for Construction, Grading, Quarrying, and Surface Mining Operations, prior to any construction activities at the site, the project proponent shall ensure that a geologic evaluation is conducted to determine if NOA is present within the area that will be disturbed. If NOA is not present, an exemption request must be filed with the APCD. If NOA is found at the site the applicant must comply with all requirements outlined in the Asbestos ATCM. This may include development of an Asbestos Dust Mitigation Plan and an Asbestos Health and Safety Program for approval by the APCD. If NOA is not present, an exemption request must be filed with the Air District. More information on NOA can be found at <http://www.slocleanair.org/business/asbestos.php>.

These or other mitigation measures could potentially be used for these projects. Future analysis of individual projects may require additional measures. There is no indication at this time that the projects would result in impacts to air quality that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

4. BIOLOGICAL RESOURCES - <i>Will the project:</i>		Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a)	<i>Result in a loss of unique or special status species or their habitats?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

4. BIOLOGICAL RESOURCES - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
b) <i>Reduce the extent, diversity or quality of native or other important vegetation?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) <i>Impact wetland or riparian habitat?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) <i>Introduce barriers to movement of resident or migratory fish or wildlife species, or factors, which could hinder the normal activities of wildlife?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) <i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The location of the proposed capital improvement projects listed in Table 1 have the following plant cover types: grassland, oak woodland, riparian scrub, riparian woodland, ruderal/weedy vegetation, Monterey pine forest, wetland, coastal streams and ornamental landscaping. Santa Rosa Creek runs through the main part of the community of Cambria. Smaller tributary streams also occur within the area.

The California Natural Diversity Database and California Native Plant Society Inventory identified the following special status species potentially existing within the USGS Cambria quadrangle:

Special Status Plant Species with Potential to Occur in the Project Area

Species	Listing Status	Habitat Requirements and Elevation Range	Life Form
Arroyo de la Cruz manzanita (<i>Arctostaphylos cruzensis</i>)	1B.2	Northern Coastal Scrub; infrequent on coastal hills; < 150 m	Shrub
San Luis Obispo owl's-clover (<i>Castilleja densiflora</i> ssp. <i>obispoensis</i>)	1B.2	Coastal grassland; < 100 m	Annual herb
Chorro Creek bog thistle (<i>Cirsium fontinale</i> var. <i>obispoense</i>)	SE, FE, 1B.2	Seep areas underlain by or near serpentine; < 300 m	Perennial herb
compact cobwebby thistle (<i>Cirsium occidentale</i> var. <i>compactum</i>)	1B.2	Chaparral, coastal dunes, coastal prairie, coastal scrub; 5-155m	Perennial herb
Hoover's button-celery (<i>Eryngium aristulatum</i> var. <i>hooveri</i>)	1B.1	Vernal pools, alkaline depressions, roadside ditches and other wet places near the coast; 5-45m	Annual /perennial herb
Cone Peak bedstraw (<i>Galium californicum</i> ssp. <i>Luciense</i>)	1B.3	Broadleaved upland forest, lower montane coniferous forest, cismontane woodland; 875-1525m	Perennial herb
Kellogg's horkelia (<i>Horkelia cuneata</i> ssp. <i>Sericea</i>)	1B.1	Sandy or gravelly openings; coastal scrub, coastal dunes, closed-cone coniferous forest, chaparral (maritime); 10-200 m	Perennial herb
Carmel Valley bush-mallow	1B.2	Cismontane woodland, chaparral;	Perennial deciduous

(<i>Malacothamnus palmeri</i> var. <i>involucratus</i>)		30-1100m. Burn dependent.	shrub
Santa Lucia bush-mallow (<i>Malacothamnus palmeri</i> var. <i>palmeri</i>)	1B.2	Chaparral, dry rocky slopes, mostly near summits, but occasionally extending down canyons to the sea; 60-365m	Perennial deciduous shrub
woodland woollythreads (<i>Monolopia gracilens</i>)	1B.2	Serpentine, broadleaved upland forest openings, chaparral openings, cismontane woodland, north coast coniferous forest openings, valley and foothill grassland; 100-1200 m	Annual herb
Monterey Pine (<i>Pinus radiata</i>)	1B.1	Closed-cone coniferous forest, cismontane woodland, dry bluffs and slopes; 25-185 m	Perennial evergreen tree
most beautiful jewel-flower (<i>Streptanthus albidus</i> ssp. <i>Peramoenus</i>)	1B.2	Open, grassy or nearly barren slopes, often serpentine; 150-800m	Annual herb

The information in this table was obtained from Hoover (1970), the California Native Plant Society Electronic Inventory (2011) and CNDDB (2011).

California Native Plant Society Listing Code

1B	Rare, threatened or endangered in California and elsewhere
1B.1	Seriously endangered in California
1B.2	Fairly endangered in California
1B.3	Not very endangered in California

Habitat Associations and State and Federally Listed Wildlife Species with Potential to Occur in the Project Area

Common Name	Scientific Name	Listing Status	Habitat Association
tidewater goby	<i>Eucyclogobius newberryi</i>	FE	Estuary; lower segments of coastal streams
steelhead – south/central California coast	<i>Oncorhynchus mykiss irideus</i>	FT	Coastal streams, open ocean
California red-legged frog	<i>Rana draytonii</i>	FT	Ponds and quiet areas of coastal streams

The information in this table was obtained from the CNDDB (2001), Jennings and Hayes (1994), Moyle et al. (1989).

California Department of Fish and Game Listing Codes

CSC	California Special Concern Species
ST	State Threatened
SE	State Endangered

Federal Listing Codes

FT	Federally Threatened
FE	Federally Endangered
FSC	Federal Species of Concern

Impact. No significant impacts to biological resources are expected to occur from smaller scale projects such as traffic signals. Larger scale improvements such as road widening will be subject to project-specific environmental analysis. Design of larger scale projects has not been initiated; therefore details are insufficient to identify and describe impacts to biological resources. Nonetheless, potentially significant impacts to biological resources may be identified in future analyses.

Construction may involve the use of heavy equipment for trenching, boring, and backfilling, as well as multiple truck trips to transport equipment, pipe, and import/export of material. Construction activity could result in adverse impacts to native vegetation and special status species. Impacts to Monterey Pine trees are not expected as all of the projects are within the urban area of Cambria, on corners that do not appear to contain trees.

Mitigation/Conclusion. No mitigation measures are needed at this time; however future project-specific analysis will identify any impacts to biological resources and describe appropriate mitigation measures if impacts are identified when more project details are available. Listed below are mitigation measures typically used to mitigate impacts to biological resources.

[BR-1] Construction activities shall be planned to avoid trees and shrubs to the extent practicable. Consideration shall be given to trimming and pruning trees where possible, rather than complete removal. Operation and parking of vehicles and equipment shall not occur within the dripline of trees that will not otherwise be affected.

[BR-2] Prior to project completion, all oak trees removed as a result of the development of the project shall be replaced at a 6:1 ratio*, and in addition, shall plant at a 2:1 ratio* for each tree impacted (e.g. root or branch pruning) but not removed. Replanting shall be completed as soon as it is feasible (e.g. irrigation water is available, grading done in replant area(s)). Replant areas shall be either in native topsoil or areas where native topsoil has been reapplied. If the latter, top soil shall be carefully removed and stockpiled for spreading over graded areas to be replanted (set aside enough from 6-12" layer). Only designated trees shall be removed. Trees scheduled for removal shall be marked.

These newly planted trees shall be maintained until successfully established. This shall include protection (e.g. tree shelters, caging) from animals (e.g. deer, rodents), regular weeding (minimum of once early Fall and once early Spring) of at least a three foot radius out from the plant and adequate watering (e.g. drip-irrigation system). Watering should be controlled so only enough is used to initially establish the tree, and reducing to zero over a three year period. If possible, planting during the warmest, driest months (June through September) shall be avoided. In addition, standard planting procedures (e.g. planting tablets, initial deep watering) shall be used.

*Public Works projects use Area Plans, Environmental Coordinator's Policies and Public Works project-specific biological analysis, whichever is higher, to determine replacement tree ratios for both removed and impacted, but not removed, trees.

[BR-3] Prior to project completion, all pine trees removed as a result of the development of the project shall be replaced at a 4:1 ratio*, and in addition, shall plant at a 2:1 ratio* for each tree impacted (e.g. root or branch pruning) but not removed. Replanting shall be completed as soon as it is feasible (e.g. irrigation water is available, grading done in replant area(s)). Replant areas shall be either in native topsoil or areas where native topsoil has been reapplied. If the latter, top soil shall be carefully removed and stockpiled for spreading over graded areas to be replanted (set aside enough from 6-12" layer). Only designated trees shall be removed. Trees scheduled for removal shall be marked.

These newly planted trees shall be maintained until successfully established. This shall include protection (e.g. tree shelters, caging) from animals (e.g. deer, rodents), regular weeding (minimum of once early Fall and once early Spring) of at least a three foot radius out from the plant and adequate watering (e.g. drip-irrigation system). Watering should be controlled so only enough is used to initially establish the tree, and reducing to zero over a three year period. If possible, planting during the warmest, driest months (June through September) shall be avoided. In addition, standard planting procedures (e.g. planting tablets, initial deep watering) shall be used.

*Public Works projects use Area Plans, Environmental Coordinator's Policies and Public Works project-specific biological analysis, whichever is higher, to determine replacement tree ratios for both removed and impacted, but not removed, trees.

- [BR-4] All trees to remain on-site that are within fifty feet of construction or grading activities shall be marked for protection (e.g. flagging) and their root zone fenced prior to any grading. The outer edge of the tree root zone is 1-1/2 times the distance from the trunk to the drip line of the tree. Grading, utility trenching, compaction of soil, or placement of fill shall be avoided within these fenced areas. Care shall be taken to avoid surface roots within the top 18" of soil. If any roots must be removed or exposed, they shall be cleanly cut and not left exposed above the ground surface.
- [BR-5] Servicing and fueling of vehicles shall be accomplished with the use of the following best management practices:
- a. Servicing and fueling shall take place as far as practical from waterways. When fueling, tanks shall not be "topped off."
 - b. A secondary containment, such as a drain pan or drain cloth, shall be used when fueling to catch spills or leaks.
 - c. Fueling and servicing shall be done only in designated areas.
 - d. Employees and subcontractors shall be trained in proper fueling, servicing, and clean-up procedures.
 - e. All fluid spills shall be reported immediately.
 - f. Storage of hazardous materials shall be as far as practical from waterways.
 - g. A contingency plan for possible leaks and spills of hazardous materials into waterways shall be developed and implemented as appropriate.
- [BR-6] Upon completion of the project, all temporarily disturbed areas shall be returned to original contours.
- [BR-7] Persons who are under County or contractor control shall not have firearms or pets; nor shall they engage in hunting or fishing.
- [BR-8] The construction zone shall be kept free from litter by providing suitable disposal containers for trash and all construction-generated material wastes. These containers shall be emptied at regular intervals and the contents properly disposed.
- [BR-9] The amount of construction-related disturbance shall be limited to the extent practicable. The project limits shall be conspicuously flagged or otherwise marked in the field. Construction activities shall be restricted within the marked areas. Storage, parking, and laydown areas shall be clearly marked. Equipment and vehicles shall be kept out of areas identified as wetlands and waters of the United States.
- [BR-10] Prior to construction the County shall conduct a pre-construction survey for special status wildlife.
- [BR-11] If construction activities are conducted during the typical nesting bird season (February 15 – September 15) pre-construction surveys shall be conducted by the County or its designee prior to any construction activity or vegetation removal to identify potential bird nesting activity, and:
- a. If active nest sites of bird species protected under the Migratory Bird Treaty Act are

observed within the vicinity of the project site, then the project shall be modified and/or delayed as necessary to avoid direct take of the identified nests, eggs, and/or young;

- b. If active nest sites of raptors and/or bird species of special concern are observed within the vicinity of the project site, then CDFG shall be contacted to establish the appropriate buffer around the nest site. Construction activities in the buffer zone shall be prohibited until the young have fledged the nest and achieved independence; and,
- c. Active nests shall be documented by a qualified biologist and a letter-report shall be submitted to the County, USFWS and CDFG, documenting project compliance with the MBTA and applicable project mitigation measures.

These or other mitigation measures could potentially be used for these projects. Future analysis of individual projects may require additional measures. There is no indication at this time that the projects would result in impacts to biological resources that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

5. CULTURAL RESOURCES - *Will the project:*

	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Disturb pre-historic resources?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) <i>Disturb historic resources?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) <i>Disturb paleontological resources?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) <i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The project is located in an area historically occupied by the Obispeno Chumash and Salinan. The Cambria area is known to be archaeologically sensitive, with several prehistoric sites and historic structures present within the community and the surrounding area. Paleontological resources have the potential of existing in the area.

Twenty-six (26) listed Historic Sites (defined as an area of unique historical significance) are located within the North Coast Improvement Fee Program Area. Of the 26, twenty-one (21) are near the capital improvement projects. These include The Lull House, The Olallieberry Inn, The Leffingwell House, The Old Santa Rosa Chapel, The Thorndyke House, The First Presbyterian Church, The Bank of Cambria, Soto's Market, Camozzi's, The Bucket of Blood Saloon, Louis Maggetti's House, The Red House, The Bianchini House, Carroll's Blacksmith Shop, Heart's Ease, Robin's Restaurant, Ian's Restaurant, The Squibb House, Rigdon Hall Restaurant, The Brambles Restaurant and The Bluebird Motel.

The geology of the fee area is mapped as terrace deposits; this geologic unit has a high potential for yielding significant paleontological resources. However, paleontological resources are not likely to be exposed as the type of site disturbance due to the projects is not sufficient to result in exposure of paleontological resources.

Impact. Proposed projects may result in impacts to archaeological resources due to activities such as excavation, soil compaction or soil filling work over sensitive sites. If a site has the potential to be impacted a Phase II survey may be required, which may result in the need for a Phase III survey depending on the extent of the impacts.

The nature and extent of impacts to archaeological resources are evaluated with respect to potential development. All projects, including the smaller scale projects such as traffic signals, will be evaluated for their potential to affect archaeological resources. Potentially significant impacts to archaeological resources may be identified in future analyses.

Mitigation/Conclusion. If an archaeological site is located within a proposed project area and it is feasible to avoid the site, this will be done. If avoidance is infeasible, further evaluation and mitigation may be required, such as a Phase I, II, or III survey. In general, a Phase I investigation includes a literature search and a surface survey to determine whether archaeological materials are present. Phase II (subsurface testing) involves determining the horizontal and vertical extent of an archaeological site. Phase III (data recovery) consists of intensive and methodical excavation and study of a pre-determined sample of the archaeological site. No mitigation measures are needed at this time; however future project-specific analysis will identify any impacts to cultural resources and describe appropriate mitigation measures. Listed below are mitigation measures typically used to mitigate impacts to cultural resources.

- [CR-1] A qualified archaeologist shall monitor initial ground disturbance activities to ensure there is no disturbance of cultural remains in the project impact area. The qualified archaeologist will ensure Environmentally Sensitive Area (ESA) fencing is installed properly at the project's borders.
- [CR-2] During earth moving activities, in the event archaeological resources are unearthed or discovered, construction in the vicinity of the find shall stop, and the Public Works project manager and the Environmental Coordinator shall be notified so that the extent and location of discovered materials may be recorded by a qualified archaeologist, and disposition of artifacts may be accomplished in accordance with state and federal law.
- [CR-3] In the event archaeological resources are found to include human remains, or in any other case when human remains are discovered during construction, the County Coroner and Environmental Coordinator are to be notified so proper disposition may be accomplished.
- [CR-4] During construction, in the event paleontologic resources are unearthed or discovered, construction activities in the immediate area shall cease and the Public Works Environmental Programs Division shall be notified so that the extent and location of discovered materials may be evaluated by a qualified paleontologist.
- [CR-5] Projects located within geologic formations known to yield paleontologic resources, which could disturb areas greater than 1 acre, and/or involve grading deeper than 3 feet will be monitored by a qualified paleontologist.

These or other mitigation measures could potentially be used for these projects. Future analysis of individual projects may require additional measures. There is no indication at this time that the projects would result in impacts to cultural resources that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

6. GEOLOGY AND SOILS - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
--	----------------------------	--------------------------------------	-------------------------	-------------------

6. GEOLOGY AND SOILS - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Result in exposure to or production of unstable earth conditions, such as landslides, earthquakes, liquefaction, ground failure, land subsidence or other similar hazards?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) <i>Be within a California Geological Survey "Alquist-Priolo" Earthquake Fault Zone"?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) <i>Result in soil erosion, topographic changes, loss of topsoil or unstable soil conditions from project-related improvements, such as vegetation removal, grading, excavation, or fill?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
d) <i>Change rates of soil absorption, or amount or direction of surface runoff?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) <i>Include structures located on expansive soils?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) <i>Change the drainage patterns where substantial on- or off-site sedimentation/ erosion or flooding may occur?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) <i>Involve activities within the 100-year flood zone?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) <i>Be inconsistent with the goals and policies of the County's Safety Element relating to Geologic and Seismic Hazards?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) <i>Preclude the future extraction of valuable mineral resources?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
j) <i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting

GEOLOGY - The following relates to the project's geologic aspects or conditions:

Topography: Nearly level to steeply sloping

Within County's Geologic Study Area?: Not applicable

Landslide Risk Potential: Low

Liquefaction Potential: Low to moderate

Nearby potentially active faults?: No Distance? Not applicable

Area known to contain serpentine or ultramafic rock or soils?: No

Shrink/Swell potential of soil: Low to high

Other notable geologic features? None

Geologic units mapped within the Cambria area include “soils on foothills and terraces.” The topography within the Cambria area ranges from nearly level to steeply sloping. The elevation ranges from approximately 0 to 300 feet above sea level. The Cambria area is outside of the Geologic Study Area designation. The Air Pollution Control District lists the Cambria area as not within an area known to contain serpentine or ultramafic rock and/or soils.

DRAINAGE – The following relates to the fee area’s drainage aspects:

Within the 100-year Flood Hazard designation? Yes, partly within

Closest creek? Several, including Santa Rosa Creek Distance? Within Cambria area

Soil drainage characteristics: Moderately drained to well drained

Santa Rosa Creek meanders through the Cambria area. Several of the traffic signal projects will be built within the Flood Hazard Zone, however as these are only traffic signals, it is unlikely that any capital projects would be significantly impacted by the flood hazard.

For areas where drainage is identified as a potential issue, a drainage plan to minimize potential drainage impacts shall be prepared. When required, this plan would need to address measures such as: constructing on-site retention or detention basins, or installing surface water flow dissipaters. This plan would also need to show that the increased surface runoff would have no more impacts than that caused by historic flows.

SEDIMENTATION AND EROSION – Soil type, amount of disturbance and slopes are key aspects to analyzing potential sedimentation and erosion issues. The project’s soil types and descriptions are listed in the previous Agriculture section under “Setting”. As described in the NRCS Soil Survey, the the project’s soil erodibility is as follows:

Soil erodibility: Moderate to high

When highly erosive conditions exist, a sedimentation and erosion control plan is required (LUO Sec. 22.52.090, CZLUO Sec. 23.05.036) to minimize these impacts. When required, the plan is prepared by a civil engineer to address both temporary and long-term sedimentation and erosion impacts. Projects involving more than one acre of disturbance are subject to the preparation of a Storm Water Pollution Prevention Plan (SWPPP), which focuses on controlling storm water runoff. The Regional Water Quality Control Board is the local extension who monitors this program.

Impact. Some projects will require grading, and may alter the existing drainage patterns slightly, however no significant impacts to geologic and soil resources are expected to occur from the smaller scale projects such as traffic signals. Larger scale improvements such as road extensions will be subject to project-specific environmental analysis. Design of these larger scale projects has not been initiated; therefore details are insufficient to identify and describe impacts to geologic and soil resources. Nonetheless, potentially significant impacts to geologic and soil resources may be identified in future analyses.

Mitigation/Conclusion. No mitigation measures are needed at this time; however future project-specific analysis will identify any impacts to geologic and soil resources and describe appropriate mitigation measures if impacts are identified when more project details are available. Listed below

are mitigation measures typically used to mitigate impacts to geologic and soil resources.

- [GS-1] Install appropriate erosion control measures (i.e., silt fences, hay bales) along the base of the proposed work area and at the downstream end of the proposed construction zone and maintain erosion control mechanisms on a daily basis.
- [GS-2] Check and maintain erosion control measures on a daily basis throughout the duration of work activities. Erosion control measures should be re-installed appropriately as the proposed work area changes.
- [GS-3] Restore all previously vegetated areas that are cleared during project activities through revegetation with appropriate indigenous native species.

These or other mitigation measures could potentially be used for these projects. Future analysis of individual projects may require additional measures. There is no indication at this time that the projects would result in impacts to geologic or soil resources that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

7. HAZARDS & HAZARDOUS MATERIALS - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Result in a risk of explosion or release of hazardous substances (e.g. oil, pesticides, chemicals, radiation) or exposure of people to hazardous substances?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) <i>Interfere with an emergency response or evacuation plan?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) <i>Expose people to safety risk associated with airport flight pattern?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) <i>Increase fire hazard risk or expose people or structures to high fire hazard conditions?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) <i>Create any other health hazard or potential hazard?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f) <i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The project areas may include areas of hazardous material contamination associated with auto-related services and the like. The project areas are not within an Airport Review area. Construction of projects will require equipment which uses potentially hazardous fuel and fluids. Any transportation improvement projects constructed with road fees would coordinate with emergency services providers. If partial or complete road closures would be required during construction, emergency access would be provided to individual businesses and residences. Emergency response time ranges from approximately 5 minutes. The project is within a medium severity risk area for fire.

Impact. Construction of capital improvement projects may require the use of hazardous materials such as fuels and lubricants, and may pose a fire safety risk. The projects may temporarily affect

traffic flow during construction, however are not expected to conflict with any regional evacuation plan. Potential impacts could involve mechanical failure of some equipment resulting in fuel or fluid spills. Improper operation of equipment in proximity to dry vegetation could result in an equipment caused fire.

No significant impacts due to hazards or hazardous materials are expected to occur from the smaller scale projects such as traffic signals. Larger scale improvements will be subject to project-specific environmental analysis. Design of these larger scale projects has not been initiated; therefore details are insufficient to identify and describe impacts due to hazards or hazardous materials. Nonetheless, potentially significant impacts due to hazards and hazardous materials may be identified in future analyses.

Mitigation/Conclusion. No mitigation measures are needed at this time; however future project-specific analysis will identify any impacts due to hazards and hazardous materials and describe appropriate mitigation measures if impacts are identified when more project details are available. Listed below are mitigation measures typically used to mitigate impacts to hazards and hazardous materials.

The water quality mitigation measures will serve to mitigate any potential impact from equipment fueling or failure by including measures to contain and clean up any spill. Standard contract specifications address hazardous materials. Fire hazard and NOA impacts will be reduced to a level of insignificance with the following mitigation measure:

[HZ-1] Any staging or equipment/vehicle parking areas shall be free of combustible vegetation and work crews shall have shovels and a fire extinguisher on site during all construction activities.

[HZ-2] Prior to construction, an evaluation of areas of serpentinite outcrops or serpentine-rich soils shall be made by a qualified professional such as a Certified Industrial Hygienist (CIH) as to whether such conditions represent a threat to human health. If so, a safety program shall be initiated and shall include providing personal protective equipment to workers and a worker education program.
All applicable dust control measures outlined in the following document shall be implemented: 17 CCR Section 93105. Asbestos Airborne Toxic Control Measure (ATCM) for Construction, Grading, Quarrying, and Surface Mining Operations.
The Naturally Occurring Asbestos (NOA) ATCM requirements may include but are not limited to: 1) an Asbestos Dust Mitigation Plan which must be approved by the APCD before construction begins, and 2) an Asbestos Health and Safety Program will also be required for some projects (<http://www.slocleanair.org/business/asbestos.asp>).

These or other mitigation measures could potentially be used for these projects. Future analysis of individual projects may require additional measures. There is no indication at this time that the projects would result in impacts to hazards and hazardous materials that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

8. NOISE - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Expose people to noise levels that exceed the County Noise Element thresholds?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

8. NOISE - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
b) <i>Generate increases in the ambient noise levels for adjoining areas?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) <i>Expose people to severe noise or vibration?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) <i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The primary transportation noise source in proximity to the project areas is Highway 1. Based on the Noise Element's projected future noise generation from known stationary and vehicle-generated noise sources, the project areas are within an acceptable threshold area.

Impact. Future projects are not expected to generate loud noises beyond typical construction noise, which is exempt under the County's noise ordinance. However, projects involving traffic signals, which may introduce idling noise at an existing intersection, may create noise impacts.

No significant impacts due to noise are expected to occur from the smaller scale projects such as traffic signals. Larger scale improvements will be subject to project-specific environmental analysis. Design of these larger scale projects has not been initiated; therefore details are insufficient to identify and describe noise impacts. Nonetheless, potentially significant impacts due to noise may be identified in future analyses.

Mitigation/Conclusion. No mitigation measures are needed at this time; however future project-specific analysis will identify any noise impacts and describe appropriate mitigation measures if impacts are identified when more project details are available. Listed below are mitigation measures typically used to mitigate impacts to noise.

To minimize short-term construction noise impacts, the project will comply with the Noise Element of the San Luis Obispo County General Plan by limiting construction activities associated with the project to specific hours, as follows:

[N-1] All construction activities associated with the project shall occur between the hours of 7:00 A.M. and 6:00 P.M. Monday through Friday and from 9:00 A.M. and 5:00 P.M. on Saturday. There will be no construction activities on Sundays.

The following additional noise reduction measures may also be appropriate for some projects:

[N-2] Construction of acoustic barriers to shield nearby noise-sensitive land uses. For aesthetic concerns, the use of sound barriers or any other architectural features that could block views from scenic highway or other view corridors shall be discouraged to the extent feasible. Long expanses of walls or fences should be interrupted with offsets and provided with accents to prevent monotony. Whenever feasible, a combination of construction elements should be used, including solid fences, walls, and landscaped berms.

[N-3] Site/project redesign and use of buffers to ensure that future development is compatible with transportation facilities.

[N-3] Changes to transportation facility design. Examples include changes in proposed roadway alignment or construction of roadways so that they are depressed below grade of nearby

sensitive land uses to create an effective barrier between the roadway and sensitive receptors.

[N-4] Use of low-noise pavements (e.g., rubberized asphalt).

These or other mitigation measures could potentially be used for these projects. Future analysis of individual projects may require additional measures. There is no indication at this time that the projects would result in noise impacts that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

9. POPULATION/HOUSING - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Induce substantial growth in an area either directly or indirectly (e.g., through projects in an undeveloped area or extension of major infrastructure)?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) <i>Displace existing housing or people, requiring construction of replacement housing elsewhere?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) <i>Create the need for substantial new housing in the area?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) <i>Use substantial amount of fuel or energy?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) <i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The road fee area includes a mix of housing types on a variety of lot sizes.

Impact. Future capital improvement projects would not displace existing housing. The projects will not result in a need for a significant amount of new housing.

Mitigation/Conclusion. No mitigation measures are needed at this time; however future project-specific analysis will identify any impacts to population/housing and describe appropriate mitigation measures if impacts are identified when more project details are available. There is no indication at this time that the projects would result in impacts to population/housing that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

10. PUBLIC SERVICES/UTILITIES - <i>Will the project have an effect upon, or result in the need for new or altered public services in any of the following areas:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Fire protection?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) <i>Police protection (e.g., Sheriff, CHP)?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

10. PUBLIC SERVICES/UTILITIES - <i>Will the project have an effect upon, or result in the need for new or altered public services in any of the following areas:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
c) Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Roads?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Solid Wastes?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Other: _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The project area is served by the following public services/facilities:

Police: County Sheriff Location: Community of Cambria

Fire: Cambria Fire (urban) & Hazard Severity: Moderate Response Time: 5-10 minutes
Cal Fire (formerly CDF) (rural)

Location: Community of Cambria

School District: Coast Unified School District.

The projects are limited to the existing roadway and associated work that will improve the safety and efficiency of the road system in Cambria. The community of Cambria is served by Cambria Fire Dept. in the urban area and Cal Fire in the surrounding rural areas for fire services, and the County Sheriff's Department for police services. The urban areas of Cambria are served by community water and wastewater systems, while development in the rural area relies on private wells and septic systems for sewer and water services.

Impact. No significant project-specific impacts to utilities or public services are expected. Proposed road improvements are expected to provide beneficial impacts by improving response time for police and fire. These projects, along with others in the area not associated with the Road Improvement Fee Program, will have a cumulative effect on police and fire protection, and schools.

The projects will not result in an increase in the local population and will not construct any facility that requires ongoing public safety services. The project will not increase the capacity of the roadway. Construction will result in minor delays.

No significant impacts to public services/utilities are expected to occur from the capital projects funded through the Road Impact Fee Program, although larger scale improvements will be subject to project-specific environmental analysis. Design of these larger scale projects has not been initiated; therefore details are insufficient to identify and describe impacts to public services/utilities.

Mitigation/Conclusion. No mitigation measures are needed at this time; however future project-specific analysis will identify any impacts to public services/utilities and describe appropriate mitigation measures if impacts are identified when more project details are available. There is no indication at this time that the projects would result in impacts to public services/utilities that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

11. RECREATION - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Increase the use or demand for parks or other recreation opportunities?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) <i>Affect the access to trails, parks or other recreation opportunities?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) <i>Other</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The County's Parks and Recreation Element shows two trails, Santa Rosa Creek Trail, and Crosstown Trail, within the Urban Reserve Line of the community of Cambria. The capital projects funded by the Road Improvement Fee Program may be along portions of the proposed trail alignments, but will not affect any trail, park, recreational resource, coastal access, and/or Natural Area.

Impact. The proposed projects involve road improvements; therefore impacts to recreation are not expected. Beneficial impacts include the addition of bike lanes on some projects, as the Road Improvement Fee Program requires any new facilities to be designed to current standards, which include bike lanes. The proposed project will not create a significant need for additional park or recreational resources. Nonetheless, larger projects will be analyzed in future CEQA analyses for their potential impacts to recreation.

Mitigation/Conclusion. No mitigation measures are needed at this time; however future project-specific analysis will identify any impacts to recreation and describe appropriate mitigation measures if impacts are identified when more project details are available. There is no indication at this time that the projects would result in impacts to recreational resources that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

12. TRANSPORTATION/ CIRCULATION - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Increase vehicle trips to local or areawide circulation system?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) <i>Reduce existing "Levels of Service" on public roadway(s)?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) <i>Create unsafe conditions on public roadways (e.g., limited access, design features, sight distance, slow vehicles)?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) <i>Provide for adequate emergency access?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) <i>Result in inadequate parking capacity?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) <i>Result in inadequate internal traffic circulation?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

12. TRANSPORTATION/ CIRCULATION - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
g) <i>Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., pedestrian access, bus turnouts, bicycle racks, etc.)?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) <i>Result in a change in air traffic patterns that may result in substantial safety risks?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i) <i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The Road Improvement Fee Program was created to identify needs for transportation improvements in the North Coast Area. The fee was established to address and fund these improvements. In general, when the County improves a road, design includes all necessary improvements to accommodate all roadway users. As such, the following are referenced in determining the road's final design:

County General Plan Circulation Element
Area and Specific Plans
County Sidewalk Ordinance
County Bikeways Plan
County Public Improvement Standards
Coordination with San Luis Obispo Regional Transit Authority

Therefore, circulation studies provide for the implementation of other County Plans.

Impact. Impacts to transportation will be beneficial. The program was created to impose fees on new development for the purpose of correcting transportation deficiencies created by new development. The capital improvement projects funded by the program will not result in an increase in the local population. Minor delays should be expected during construction of individual projects.

Mitigation/Conclusion. The Road Improvement Fee Program is itself mitigation for all new development in the Program Area. The fee is designed to fund road improvements that are identified as necessary due to new development in the North Coast Area.

13. WASTEWATER - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Violate waste discharge requirements or Central Coast Basin Plan criteria for wastewater systems?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) <i>Change the quality of surface or ground water (e.g., nitrogen-loading, day-lighting)?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

13. WASTEWATER - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
c) <i>Adversely affect community wastewater service provider?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) <i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The Cambria CSD provides wastewater service to the community of Cambria. Properties outside of the Urban Reserve Line (URL) are served by individual septic systems.

Impact. Road work may require temporary impacts to portions of the wastewater collection system during construction, however no significant impacts to wastewater are expected to occur from capital projects funded by Road Impact Fees. Transportation improvement projects will not introduce new generators of wastewater to the project area. If necessary a portable chemical toilet will be on site for use by construction crews.

Mitigation/Conclusion. No mitigation measures are needed at this time; however future project-specific analysis will identify any impacts to wastewater and describe appropriate mitigation measures if impacts are identified when more project details are available. There is no indication at this time that the projects would result in impacts to wastewater that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

14. WATER - <i>Will the project:</i>	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) <i>Violate any water quality standards?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) <i>Discharge into surface waters or otherwise alter surface water quality (e.g., turbidity, temperature, dissolved oxygen, etc.)?</i>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) <i>Change the quality of groundwater (e.g., saltwater intrusion, nitrogen-loading, etc.)?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) <i>Change the quantity or movement of available surface or ground water?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) <i>Adversely affect community water service provider?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) <i>Other:</i> _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting. The topography of the project areas varies from nearly level to steeply sloping. Santa Rosa Creek is the dominate creek in the area, with other smaller tributary streams.

Water Supply

Cambria is completely dependent on a limited groundwater supply from the San Simeon and Santa Rosa groundwater basins associated with its two well fields, supplied by the Cambria Community

Services District (CSD). According to the 2009-2020 Annual Resource Summary Report prepared by the County Department of Planning and Building, Cambria is at a level of severity III for water supply. Level III occurs when the demand for the resource equals or exceeds its supply and is the most critical level of concern.

Water Quality

Projects involving more than one acre of disturbance may be required to prepare a Storm Water Pollution Prevention Plan (SWPPP) to minimize on-site sedimentation and erosion. When work is done in the rainy season, the County Ordinance requires that temporary sedimentation and erosion control measures be installed during the rainy season.

Santa Rosa Creek is not listed as impaired on the current CWA Section 303(d) List of Water Quality Limited Segment maintained by the Regional Water Quality Control Board.

Impact. Construction of capital improvement projects will involve temporary disturbance, partial or full closure of existing roadways, materials storage, and contractor staging areas. Exposed and freshly disturbed soils, heavy equipment utilizing diesel fuel and hydraulics, and road surface materials all pose a threat to water quality during the construction period. Soil along existing roadways may be exposed during the construction phase of larger capital improvement projects. Adverse water quality impacts could result from the release of fine sediments into any potential nearby creeks or rivers, and the accidental release of petroleum products from construction equipment. Projects such as road widenings will increase the amount of impervious surfaces, and may result in an incremental increase in flood potential, reduction in groundwater recharge and/or direct discharge of pollutants into waterways.

Water may be required during construction for dust control and to achieve compaction specifications. The water requirements for construction will be short term and are expected to be insignificant. Larger scale improvements will be subject to project-specific environmental analysis. Design of these larger scale projects has not been initiated; therefore details are insufficient to identify and describe impacts to water resources. Nonetheless, potentially significant impacts to water resources may be identified in future analyses.

Mitigation/Conclusion. No mitigation measures are needed at this time; however future project-specific analysis will identify any impacts to water resources and describe appropriate mitigation measures if impacts are identified when more project details are available. Listed below are mitigation measures typically used to mitigate impacts to water.

Construction will follow standard drainage, erosion and sedimentation control measures, minimizing impacts to any water resources. Soils exposed during construction will be hydroseeded and planted. In addition to the above-listed Geology and Soils erosion control mitigation measures in Section 6, the following mitigation measures may reduce the potential impacts:

- [WR-1] All project-related spills of hazardous materials shall be cleaned up immediately.
- [WR-2] On a daily basis, check and maintain all equipment and vehicles that would be operated within the identified work area to ensure proper operation and avoid potential leaks or spills.
- [WR-3] Evaluate potential increases in surface water runoff volume for each circulation improvement project with the potential to have significant effects on drainage ways prior to final design approval. If it is found that increased runoff or increased flood hazards will result from the projects, site-specific measures to control runoff (i.e., the use of detention or retention basins, french drains, vegetated swales and medians, or other techniques designed to delay peak flows) shall be implemented.

- [WR-4] Direct runoff into subsurface percolation basins and traps that would allow for the removal of sediment, urban pollutants, fertilizers, pesticides, and other chemicals.
- [WR-5] Employ best management practices (BMPs) to control the discharge of materials from the site and into creeks and local storm drains. BMP methods may include, but would not be limited to, the use of temporary retention basins, straw bales, sand bagging, mulching, erosion control blankets, soil stabilizers, and native erosion control grass seed.
- [WR-6] Incorporate Low Impact Development (LID) techniques, including best management practices (BMPs) and integrated management practices (IMPs), into the roadway improvements. LID techniques that infiltrate, filter, store, evaporate, and detain runoff shall be encouraged in order to reduce stormwater runoff, improve water quality, and increase recharge of the groundwater basin.
- [WR-7] Employ porous pavement materials, where feasible, to allow for groundwater percolation.
- [WR-8] Thoroughly evaluate the drainage and groundwater recharge characteristics of the area in which a circulation improvement is proposed prior to the finalization of project design. In those instances where the capacity of the existing or planned stormwater drainage systems may be exceeded, identify appropriate site-specific measures to control surface runoff and to detain surface water runoff on-site, if feasible. Based on the results of the drainage/groundwater recharge evaluation, any proposed improvement project shall be designed to minimize the area of impervious surface and to maintain existing drainage/groundwater recharge patterns to the extent practicable.

These or other mitigation measures could potentially be used for these projects. Future analysis of individual projects may require additional measures. There is no indication at this time that the projects would result in impacts to water resources that could not be mitigated to a level of insignificance with the incorporation of standard mitigation measures.

15. LAND USE - Will the project:		Inconsistent	Potentially Inconsistent	Consistent	Not Applicable
a)	<i>Be potentially inconsistent with land use, policy/regulation (e.g., general plan [county land use element and ordinance], local coastal plan, specific plan, Clean Air Plan, etc.) adopted to avoid or mitigate for environmental effects?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b)	<i>Be potentially inconsistent with any habitat or community conservation plan?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c)	<i>Be potentially inconsistent with adopted agency environmental plans or policies with jurisdiction over the project?</i>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

15. LAND USE - Will the project:	Inconsistent	Potentially Inconsistent	Consistent	Not Applicable
d) Be potentially incompatible with surrounding land uses?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Other: _____	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Setting/Impact. Surrounding uses vary depending on the location. Referrals were sent to outside agencies to review for policy consistencies (e.g., CAL FIRE for Fire Code, APCD for Clean Air Plan, etc.). The projects were found to be consistent with these documents (refer also to Exhibit A on reference documents used). None of the improvement projects are within or adjacent to a Habitat Conservation Plan area. The project is consistent or compatible with the surrounding uses.

The project is limited to the road and associated work. The projects will be consistent with the surrounding land uses and will facilitate efficient and safe movement of people through the area.

Mitigation/Conclusion. No inconsistencies were identified and therefore no additional measures above what will already be required were determined necessary.

16. MANDATORY FINDINGS OF SIGNIFICANCE - Will the project:	Potentially Significant	Impact can & will be mitigated	Insignificant Impact	Not Applicable
a) Have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

- c) ***Have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?***

In addition, the following project specific information and/or reference materials have been considered as a part of the Initial Study:

2010 Update, North Coast Circulation Study. County of San Luis Obispo, Department of Public Works. December 2009.

Mitigation Monitoring Plan

The purpose of a Mitigation Monitoring Plan is to provide a program to examine, document and record compliance with the environmental plans and specifications pertinent to the proposed project, in order to comply with Section 21081.6 of the California Environmental Quality Act (CEQA). This plan provides the standards and methods necessary to ensure and document the implementation of the environmental mitigation measures which have been included in the project description as well as with the conditions of approval placed on project permits. Responsibility for ensuring successful implementation of the Mitigation Monitoring Plan lies with the County of San Luis Obispo, as the project proponent and Lead Agency for the project under CEQA.

If the recommended mitigation measures and monitoring plan are implemented successfully, the potential significant adverse effects stemming from project construction will be reduced to a level of insignificance.

Mitigation monitoring will be carried out by the Environmental Programs Division of the County's Department of Public Works. The Environmental Programs Division provides environmental services to the Department of Public Works, including mitigation compliance and monitoring, with CEQA oversight by the County's Environmental Coordinator.

Upon approval of the CEQA document, and issuance of all required permits, the Environmental Programs Division will assign internal responsibility for compliance with each mitigation measure to one or more members of the project team. Responsible parties include the Environmental Programs Division, the Project Manager (PM), the Resident Engineer (RE), and/or on-site monitors.

Mitigation measures are organized into project design, pre-construction, construction, and post construction tasks. Compliance with mitigation measures is documented in the project file through written reports, accompanied by project photos where necessary. Post construction monitoring of revegetation and other project components is documented by yearly reports, on a schedule typically determined by one or more of the project permits. Depending on the complexity of the post construction mitigation effort, tasks will be carried out by county staff or technical experts under contract to the County. Post construction monitoring is typically conducted for three to five years, depending on permit requirements and success criteria.

Where necessary, construction personnel will be required to attend a crew orientation meeting. The meeting will be conducted by the RE and will be used to acquaint the construction crews with the environmental sensitivities of the project site. The orientation meeting shall place an emphasis on the need for adherence to the mitigation measures and permit conditions as well as the need for cooperation and communication among all parties concerned (i.e., RE, Environmental Programs Division, Environmental Coordinator, construction personnel) in working together to solve problems and arrive at solutions in the field.

2010 Update North Coast Circulation Study

On February 25, 1992, the Board of Supervisors approved the North Coast Circulation Study. Also on February 25, 1992, the Board adopted a Resolution imposing road improvement fees on new development under the provisions of Ordinance 2379. The Board also adopted the most recent update of the North Coast Road Improvement Fee Resolution in December 2009. This is the 2010 Update Report.

Building Activity. For the period from July 1, 2009 through June 30, 2010, four building permits were issued; two for single-family residences and two for commercial service buildings.

Appeals of Fee. There have been no fee appeals between July 1, 2009 through June 30, 2010.

Road Improvement Fund.

Description	Total Amount (\$)
Account Status	
Fee Balance	\$23,962.60
Fees Received	\$3,006.00
Interest Earned	\$180.99
Expenditures	\$(5,264.73)

Transportation Improvements

The North Coast Circulation Study contains a list of recommended improvements for all modes of transportation in the community as well as an adopted Capital Improvement Program list for funding by Road Impact Fees. The following is a list of projects currently being developed in the North Coast Area along with modifications recommended for the program and the associated fee schedule.

Projects in Development

- 1) San Simeon Road Bridge Replacements**
Funding: Federal Highway Bridge Replacement Program
Estimate: \$ 6,200,000
Construction: Construction would begin in the Spring of 2011

- 2) Main Street at Santa Rosa Creek Bridge Replacement**
Funding: Federal Highway Bridge Replacement Program
Estimate: \$ 4,000,000
Construction: Construction would begin in the Spring of 2012

Road Improvement Fees

North Coast model needs to be looked at for changes in circulation needs and costs, especially changes caused by the residential lot retirement program. Due to the need to address these and other changes, we are recommending that the existing fee structure not be modified at this time. With the North Coast General Plan recently updated, there is an opportunity to update the transportation model to account for the new plan's land uses.

Existing Fees		Area A	Area B	Area C	Area D	Area E
Residential	Pk Hr Tp	\$ 527	\$ 992	\$ 1267	\$ 586	\$ 282
Retail	Pk Hr Tp	\$ 262	\$ 262	\$ 262	\$ 262	\$ 262
Other	Pk Hr Tp	\$ 403	\$ 403	\$ 403	\$ 403	\$ 403

Notes

Pk Hr Tp: PM peak hour trips, as determined by the Board of Supervisors' Policy

The "Residential" category includes single-family and multi-family dwellings, hotels, motels and camping facilities.

The "Retail" category includes retail merchandise, restaurants, service stations, post offices and financial institutions.

All other types of land use will be charged at the rate listed above as "Other."

FROM: Lynda L. Auchinachie, Agriculture Department

SUBJECT 2011 Department of Public Works Transportation and Circulation Studies (1589)

Thank you for the opportunity to review and comment on the 2011 Transportation and Circulation Studies. The studies address the need for capacity related transportation improvements necessary to offset cumulative traffic impacts on community infrastructure that result from new development. The studies identify the location for potential improvement projects and many of the projects are located within agricultural areas. It is not possible to identify project specific impacts based on current information; however, a variety of impacts to agricultural resources and operations may result from the proposed improvements and such potential impacts should be evaluated during subsequent project specific environmental review. Impacts may include, but not be limited to, the following:

- direct and indirect conversion of agricultural resources, including Important Agricultural Soils, to nonagricultural uses
- temporary and/or permanent access limitations to agricultural operations
- necessity for infrastructure relocation
- land use incompatibilities and operational restrictions during construction
- Williamson Act public land acquisition

These comments and recommendations are based on policies in the San Luis Obispo County Agriculture Element, Conservation and Open Space Element, the Land Use Ordinance, the California Environmental Quality Act (CEQA), and on current departmental policy to protect agricultural resources and to provide for public health, safety and welfare while mitigating negative impacts of development to agriculture. If I can be of further assistance, please contact me at 781-5914.
